

# Fortify Portfolio Delivery Models

Fortify delivers a holistic, inclusive, and extensible platform that supports the breadth of your portfolio. It offers flexible deployment options to suit the environment your team is developing in. Solutions can be deployed in house or as a service to build a scalable, nimble Software Security Assurance program that meets the evolving needs of today's IT organization.

## Product Overview

### Fortify on Demand

Fortify on Demand by OpenText™ for Security as a Service is an easy and flexible way to test the security of your software quickly and accurately, without dedicating additional resources or having to install and manage any software. You can launch your application security initiative in less than a day and no infrastructure investments or security staff are required. Fortify on Demand also grows with your business. You can scale to test all applications in your organization across the software development life cycle. Every scan includes expert manual review and accounts are supported by a dedicated team, with global 24/7 support.

### Fortify Hosted

Fortify Hosted by OpenText™ is a cloud-based enterprise service for automating application security programs. It enables management, development, and security teams to work together to triage, track, validate, and manage software security activities. OpenText™ is responsible for provisioning Fortify Hosted on an AWS cloud platform and delivers ongoing infrastructure, application, and support service remotely.

### Fortify On-Premises

Fortify offers the broadest set of software security testing products spanning the software lifecycle:

- Fortify Static Code Analyzer by OpenText™ for Static Application Security Testing (SAST): Identifies vulnerabilities during development and prioritizes those critical issues when they are the easiest and least expensive to fix. Scanned results are stored in Fortify Software Security Center by OpenText™.
- Fortify WebInspect for Dynamic Application Security Testing (DAST): Identifies and prioritizes security vulnerabilities in running web applications and web services. Integrates Interactive Application Security Testing (IAST) to identify more vulnerabilities by expanding coverage of the attack surface. Scanned results can be stored in Fortify Software Security Center.

## Key Features

Testing (MAST), and optionally Software Composition Analysis (SCA). Scan time is guaranteed by SLA. Fortify on Demand also includes software installation and upgrades, assessments (scan setup, tuning, results auditing, additional manual testing), technical support (TAM for Fortify on Demand), and toolchain integration (process and technical) for customers or professional services. Fortify on Demand enables teams to work in a fully SaaS-based environment.

#### FORTIFY HOSTED

Fortify Hosted enables Static Application Security Testing (SAST), Dynamic Application Security Testing (DAST), and optionally Software Composition Analysis (SCA) to be fully integrated into the Software Development Life Cycle (SDLC). It consists of a single tenant, cloud-based solution with a web-based user interface that enables you to configure, perform, and manage application security assessments. Because Fortify Hosted is a dedicated cloud environment, the scan time is dependent on your load. Fortify Hosted also includes Fortify software installation and upgrades, technical support
