Discover, define, and contextualize cyberthreats with SaaS-based global signal analytics

Global Adversary Signals

OpenText Core Adversary Signals offers insights beyond traditional nearSpace models like SIEM, MDR, and XDR. It extends your reach beyond the borders of the organization to find key insights in global internet signals.

In its simplest deployment, OpenText Core Adversary Signals does not require additional infrastructure deployment or ingestion of log files to deliver targeted and accurate results. It runs machine-aided adversary analytics on global signals entering and exiting a user-defined "covered space" to help you
