OpenText Information Assurance

Collect, cull and control data for eDiscovery

Collecting data is a crucial requirement for responding to

The OpenText Information Assurance agent supports multiple operating systems, virtual and physical machines and is passive until called upon. The OpenText Information Assurance agent can even be pushed out to endpoints remotely, and completes collections from endpoints with inconsistent network connections, such as smartphones and laptops.

Gain early insight into scope and reduce downstream review costs and time

When a matter arises, legal teams need to know the potential costs and risks in order to make faster data-driven decisions on case strategy. With OpenText Information Assurance pre- and post-collection analytics, users gain rapid insight into cost and scope while quickly reducing the volume of information for downstream review. Features enable users to:

- Test search criteria before any data is collected;
- Proactively identify potential custodians and k
